$\parbox[c]{17.5cm}{\scriptsize \textbf{Notes:}}$ The figure presents the catchment areas, as defined in ([\ref{eq: catchment}](#)), for the one-dimensional case where 5 plants are located in a line. The left plot presents the case where all locations are equally productive, while the right plot presents a case where plant 3's location is more productive. Each dot in each plot corresponds to the location of a plant. Each number on parenthesis under each dot corresponds to the value for b_o for that dot. The number

above each brace indicates which plant serves that location, i.e. the catchment area of a particular plant.}
